

What You Can Do To

Help Prevent Wasted Food

In the United States, food loss and waste is about **30 percent** of the food supply at retail and consumer levels. While the amount of food wasted at schools has not increased during recent years, there are many ways that everyone on a school campus can help reduce, recover, and recycle food before it goes to waste.

INSIDE: TIPS FOR SCHOOL STAFF, PARENTS, AND STUDENTS.

Buy what you need.

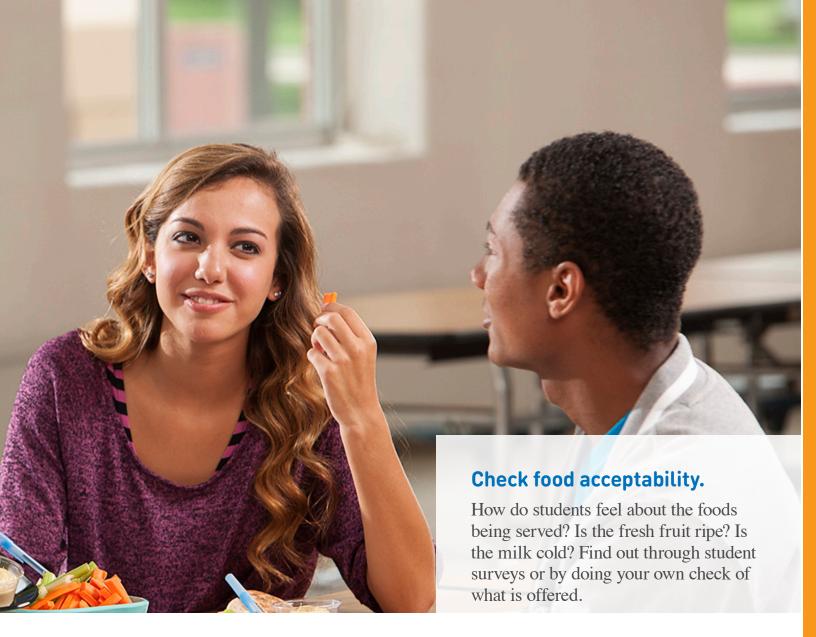

Use production records and our Food Buying Guide (www.fns.usda.gov/tn/food-buying-guide-school-meal-programs) to help you reduce leftover food.

Consider food sharing.

Partner with your local health department to implement safe practices that encourage kids to leave unwanted food on "share tables."

Market your meals.

Highlight new foods on your menus and serving lines. Consider holding taste tests and recipe competitions or creating a student advisory committee to provide feedback on food acceptability and recipe names. Check out the Team Nutrition Popular Events Booklet for resources: www.fns.usda.gov/team-nutrition-popular-events-idea-booklet.

Give kids a choice.

Participate in the "Offer Versus Serve" option, which allows students to decline some of the food offered in a reimbursable lunch or breakfast. Or, consider a salad or produce bar to give children more choices among a variety of fruits and veggies.

Cut fruit into smaller pieces.

Whole fruit is more likely to be thrown away. Orange slices and apple quarters are easier and faster for kids to eat.

Create a Smarter Lunchroom.

Offer a grab-and-go line for kids who want to get through the line faster so they have more time to eat. Use serving utensils that help kids take reasonable portions. Get more ideas at: http://smarterlunchrooms.org.

Do a class project.

Investigate food waste with your class and ways to reduce it. Consider a composting project. Check out these resources from the U.S. Environmental Protection Agency: www.epa.gov/osw/education/teach_comp.htm.

Learn about food.

Use safe excess foods from the cafeteria for food science and cooking activities in the classroom.

Encourage healthful choices.

Integrate school gardens and nutrition education activities into Science, Technology, Engineering, and Mathematics (STEM) classroom lessons. Get free class materials from Team Nutrition at: http://teamnutrition.usda.gov.

Visit local food producers.

Take a trip to a farm, garden, or farmers market and learn about gleaning, the act of collecting excess fresh foods in order to provide it to those in need. Find more information at: www.usda.gov/oce/foodwaste/resources/donations.htm.

Fill them with praise, not candy.

Instead of using sweets and food parties as incentives for good behavior or grades, try non-food rewards instead. Students may not have an appetite for healthful meals if they fill up on sweets and snacks beforehand.

Schedule recess before lunch.

It can reduce plate waste by as much as 30 percent.

Give kids time to eat.

Extending the lunch period from 20 to 30 minutes can help reduce waste by nearly one-third.

Donate safe food.

Partner with your health department and local hunger relief organizations to donate safe and wholesome food. See the USDA memo on food donation at: www.usda.gov/oce/foodwaste/FNS_Guidance.pdf.

Join the U.S. Food Waste Challenge!

Sign up today so your school is recognized. More information is at: www.usda.gov/oce/foodwaste/join.htm.

Raising Healthy Eaters.

Kids need foods from all of the five MyPlate food groups to learn, grow, play, and stay healthy. But, it can be discouraging when children do not eat the healthful foods offered to them. Keep these tips in mind for foods offered at home or at school.

Encourage sensible portions.

Teach kids to take smaller amounts and then go back for seconds if they are still hungry. Don't ask children to eat everything on their plate. This can teach kids to overeat even when their body feels full.

· New foods take time.

Sometimes children do not take to new foods right away. If children reject a food, try preparing it a different way instead of removing it from the menu altogether. Nutrition education and promotion can also help encourage children to try new foods.

Tips for Parents

Have a try day at home.

If your school offers a food your child has not eaten before, consider making it and trying it at home together.

Take action at school.

If you are able, volunteer at your child's school cafeteria and help younger children open milk cartons, yogurt, and other food packages.

Make room for healthful meals.

Encourage your school's parent organization to choose fundraisers that do not involve the sale of food during the school day. Work with teachers to schedule celebrations involving food later in the day. This way, kids will not be too full to eat healthful meals at lunch and breakfast. Get more information about healthier school fundraisers at: www.fns.usda.gov/best-practices-healthy-school-fundraisers.

Reduce food waste at home.

Wondering what to make with leftover ingredients? Find kid-approved recipes at:

http://whatscooking.fns.usda.gov.

Sign up, join in.

Be part of surveys, taste tests, and advisory groups that help your cafeteria decide what goes on the school menu.

Take it with you.

If your school offers whole fruit and you don't have time to eat it, take it with you if your school allows it. Enjoy the fruit later as a snack.

Look around.

If food is being wasted at your school, home, or in your community, work with teachers and a student club or student leadership group to come up with ways to reduce, reuse, or recycle food.
